

Hallmark Floors®

Simply Better - Green Certification Information

Hallmark Floors takes Environmental Stewardship seriously and have since our inception over 12 years ago. We have led the way with Ultra low VOC [Volatile Organic Compounds] in our finish and core materials as well as responsibility in how we source the lumber that makes our floors so durable, easy to clean and beautiful.

Breathe Easy With Hallmark Floors Green!

California has passed stringent requirements that exceed the **US OSHA** requirements referred to as **C.A.R.B.** or the California Air Resources Board. Hallmark Floors is proud to have been certified by the Regulatory agency responsible with certifying CARB compliance, as having passed **Phase 2** well before it was required.

FACT: Hallmark Floors passed these standards years ago and has verified US Based Independent testing to confirm this.

So while most companies "suddenly" become compliant and take the costly step of adapting their processes and only then state their belief in the reduction of VOC's, Hallmark Floors did it well before it became fashionable or required. Further evidence of our strong belief in the overall quality of not just our products, but in your home and the quality of your life through inspiring, Fashionable Flooring and the effect it has on your well being.
